

Thank You!
Corporate and Sustaining Members
of the Aerospace Medical Association
Now in Our 91st Year!

The financial resources of individual members alone cannot sustain the Association's pursuit of its broad international goals and objectives. Our 91-year history is documented by innumerable medical contributions toward flying health and safety that have become daily expectations by the world's entire flying population—commercial, military, and private aviation. However, support from private and industrial sources is essential. The following organizations, who share the Association's objectives or have benefitted from its past or current activities, have affirmed their support of the Association through Corporate Membership.

Adams Advanced Aero Technology	David Clark Company, Inc.
