

INDEX TO SUBJECTS

A

- Abilities, time cost of provider skill in spaceflight-816
- Abstracts
92nd Annual Scientific Meeting-143
not presented-652
- Acceleration
+Gz exposure and flight duty limitations-390
continuous glucose monitoring in spaceflight-688
physiological effects of suborbital spaceflight-830, E1(Dec)
risks for pregnant aeromedical helicopter crew-866
- Accidents, aviation
in Germany, injury severity and concomitant factors-442
on the ground-597
sightseeing, with helicopters and fixed-wing aircraft-532
- Actigraphy
in-flight sleep on ultra-long-range flights-4
responses to ketogenic diet-507
sleep and infantry battle drill performance-557
- Adjustment disorder, pilot mental health-696, E1(Sept)
- Aeromedical certification
5-year analysis of medical examinations-499, E1(June)
of insulin-treated diabetic pilots-627
under-reporting of medical conditions-376, E2(Apr)
- Aeromedical disposition—*See also* Waivers
abnormal liver chemistries with physical exertion-129
after catheter ablation of arrhythmic disorders-725
after TBI-116
arrhythmogenic right ventricular cardiomyopathy in a private pilot-111
cytomegalovirus infection in a fighter pilot-58
epilepsy in a pilot-824
keratoconus in pilots-840
latent autoimmune diabetes in two fighter pilots-106
migraine in military pilots and flight surgeons-26
nasal fracture in a fighter pilot-399
obstructive sleep apnea in army aircrew-415
possible multiple sclerosis and alcohol abuse in a pilot-764
return to flying duties after COVID-19 booster-593
- Aeromedical workforce, managing risk in pregnant civilian helicopter aircrew-866
- Aerospace Medical Association (AsMA)
92nd Annual Scientific Meeting abstracts-143
bylaws-335
minutes from 2021 business meeting-333
past presidents-329
planning for 2023 meeting in New Orleans-711
- Aerospace medicine
1st International Conference of Aerospace Medicine-773
gratefulness for post-COVID return of-829
prognosticating on the future of-345
- Aerospace Medicine and Human Performance*
change in printing-128
future directions-1
President's Page-3, 69, 135, 345, 405, 479, 545, 617, 663, 711, 773, 829
swan song for managing editor-877
- Aerospace Medicine Clinic
abnormal liver chemistries with strenuous physical activity-129
cytomegalovirus infection-58
epilepsy in a military pilot-824
nasal fracture-399
possible multiple sclerosis and alcohol abuse-764
- Aerospace Toxicology Association Group-3
- Age effects, in suborbital spaceflight-830, E1(Dec)
- Air medical evacuations
CASA medevac operations-536
of citizens during COVID-19 epidemic-94
risks for pregnant aeromedical helicopter aircrew-866
- Air quality, propylene glycol limits in spacecraft air-467
- Air traffic controllers
aviation medical examinations in-499, E1(June)
executive brain function in-426
- Aircraft—*See specific aircraft types*
- Airline transport pilots, COVID-19 pandemic effects on well-being-734, E1(Oct)
- Alanine aminotransferase (ALT), abnormal, after strenuous physical activity-129
- Alaska, sightseeing aviation accidents-532
- Alcohol abuse, neurocognitive deficit in a commercial airline pilot-764
- Alcohol consumption, risk of hyperuricemia in civilian pilots-22
- Alerting, attention changes at high altitude-791
- Altitude chamber training, minimizing risks of-811
- Altitude effects
attention network changes of high-altitude migrants-791
in-flight medical emergency management skills-633
repeated ischemic preconditioning-13
test-retest variation in VGE formation-46
ultrasonic video grading of VGE-54
- Anesthetist-intensivists, in-flight emergency management skills-633
- Animal models, space radiation and switch task performance-673
- Anxiety, in pilots-696, E1(Sept)
- Appendectomy
open, spatial volume needed in spacecraft for-760
skill and time cost of medical officer in spaceflight-816
- Arrhythmias
arrhythmogenic right ventricular cardiomyopathy-111
return to flying after catheter ablation for-725
risk after COVID-19 in pilots-855
- Arrhythmogenic right ventricular cardiomyopathy, in a private pilot-111
- Aspartate aminotransferase (AST), abnormal, after strenuous physical activity-129
- Astronauts—*See also* Spaceflight
blood flow restriction exercise in-32
eye tracking during spacecraft docking-480
optic disc edema in-396
- Athletes
cardiovascular concerns after COVID-19 in-855
elite, personality traits of-783
- Atopic dermatitis, genetic markers in aviation applicants-806
- Attention
eye tracking during spacecraft docking-480
network changes of high-altitude migrants-791
- Aura, migraine in military pilots and flight surgeons-26
- Autoimmune diabetes, latent, in fighter pilots-106
- Autonomic responses, to ketogenic diet-507
- Aviation medical certification, with arrhythmogenic right ventricular cardiomyopathy-111
- Aviation safety—*See* Safety, aviation
- Aviators—*See* Pilots

B

- Back pain, +Gz exposure and flight duty limitations-390
- Barodontalgia, in scuba divers-421
- Barotrauma
dental, in scuba divers-421
mitigating risks of altitude chamber training-811

Page numbers preceded by an "E" indicate supplemental material for individual articles that can be found online at www.ingentaconnect.com/content/asma/amhp.

Barriers, to healthcare for pilots (Commentary)–649
 Biomathematical modeling, of in-flight sleep–4
 Blood flow restriction exercise, as countermeasure in spaceflight–32
 Blood glucose
 continuous glucose monitoring in spaceflight–688
 medical certification of insulin-treated diabetic pilots–627
 Bloodwork, abnormal liver chemistries after severe exercise–129
 Body mass index, hyperuricemia risk in civilian pilots–22
 Bone loss
 potential of NMES to prevent–774
 tracking risk in space–546
 Brazilian Air Force, air evacuations of citizens during COVID-19 epidemic–94

C

Cabin crew
 Pieterse protocol for return to flight assessment–551
 sleepiness and fatigue in–50
 Calcium, urinary, in first morning void in space–546
 Cardiology
 advances in–405
 arrhythmogenic right ventricular cardiomyopathy–111
 Cardiac arrest, assessing in-flight management skills–633
 cardiac rupture due to fall from height–755
 cardiovascular concerns from COVID-19 in pilots–855
 exercise ECG screening in military aircrew–666
 Cardiomyopathy, arrhythmogenic right ventricular, in a private pilot–111
 Cardiovascular health, exercise ECG screening in military aircrew–666
 CASA medevac operations–536
 Case reports
 arrhythmogenic right ventricular cardiomyopathy–111
 cardiac rupture due to fall from height–755
 CASAS Medevac operations–536
 fitness to fly after TBI–116
 hyperventilation-induced hypocapnia–470
 latent autoimmune diabetes in fighter pilots–106
 Catheter ablation, of arrhythmic disorders, return to flying after–725
 Cerebral blood flow
 in hypergravity and microgravity–581
 rapid fluid infusion effects on–347
 Cerebral perfusion, dose response of hyperoxia with–493
 Certification, aeromedical
 5-year analysis of medical examinations–499, E1(June)
 of insulin-treated diabetic pilots–627
 under-reporting of medical conditions–376, E2(Apr)
 Chemical exposure
 revisions to propylene glycol SMACs–467
 SMACs for hydrogen fluoride–746
 Circadian disruption, in pregnant aeromedical helicopter aircrew–866
 Civilian pilots—*See also* Pilots
 arrhythmogenic right ventricular cardiomyopathy–111
 hyperuricemia risk factors–22
 Cognitive performance—*See also* Human performance
 in analog lunar habitat–70
 in evaluation of TBI injury (Commentary)–758
 responses to ketogenic diet–507
 space radiation effects on switch task performance–673
 Cognitive style, pilots' confirmation bias in lost procedures–618
 Coincidence anticipation timing, head tracking vs. eye tracking–79
 Collaborative Arrangement for the Prevention and Management of Public Health Events in Civil Aviation (CAPSCA)–665
 Color vision, Farnsworth-Munsell 100-Hue test in pilots–362, E1(Apr)
 Combat search and rescue, personality traits of pararescue personnel–783

Commercial airline cabin crew, sleepiness and fatigue in–50
 Commercial airline pilots
 computerized test of color vision in–362, E1(Apr)
 COVID-19 pandemic effects on well-being of–734, E1(Oct)
 evaluation of TBI in–758
 fatigue and sleep during COVID-19–433, E1(May)
 in-flight sleep during long- and ultra-long-range flights–368
 possible multiple sclerosis and alcohol abuse in–764
 Commercial spaceflight
 continuous glucose monitoring in–688
 physiological effects of simulated suborbital spaceflight–830, E1(Dec)
 Confirmation bias, in lost procedures–618
 Conflict resolution, in analog lunar habitat–70
 Continuous glucose monitoring—*See* Glucose monitoring
 Cosmic radiation
 effects on switch task performance–673
 risks for pregnant civilian helicopter aircrew–866
 Cost/benefit analysis, of physical therapy/strength training for fighter pilots–637
 Countermeasures—*See* Exercise countermeasures.
 Counterweight, effects on neck pain in helicopter pilots–458
 COVID-19
 air evacuation of citizens during epidemic–94
 cardiovascular concerns in pilots during and after–855
 fatigue and sleep in commercial pilots during–433, E1(May)
 in-flight sleep models during humanitarian flights–4
 international integration for aviation safety during–665
 long-haul, cardiovascular concerns after–855
 pandemic effects on well-being of professional pilots–734, E1(Oct)
 pandemic-related sleepiness and fatigue in cabin crew–50
 pandemonium due to–69
 published guidelines from aviation authorities–855
 COVID-19 vaccines
 cardiovascular concerns related to–855
 return to flying duties after a booster dose–593
 Crashes—*See* Accidents, aviation
 Cytomegalovirus infection–58

D

Decompression, hypoxia prevention model–99
 Decompression sickness (DCS)
 epidemic, hysteria as trigger for–712
 mitigating risks of altitude chamber training–811
 screening with ultrasonic video grading of VGE–54
 test-retest variation in VGE formation–46
 Dentistry, barodontalgia and dental barotrauma in scuba divers–421
 Depression, pilot mental health–696, E1(Sept)
 Dermatology, genetic markers of atopic dermatitis–806
 Diabetes mellitus
 continuous glucose monitoring in spaceflight–688
 insulin-treated, medical certification of pilots with–627
 latent autoimmune, in fighter pilots–106
 Diet, ketogenic, responses to–507
 Disqualification—*See also* Aeromedical disposition
 medical conditions among aircrew candidates–384
 return to flying duties after COVID-19 booster–593
 Diving
 barodontalgia and dental barotrauma in scuba divers–421
 post-COVID-19 cardiovascular concerns in–855
 ultrasonic video grading of VGE–54
 Docking, spacecraft, eye tracking during–480
 Drowsiness, in simulated solo flight–354
 Dynamic visual acuity, head-mounted assessment of–800
 Dyschromatopsia, Farnsworth-Munsell 100-Hue test in pilots–362, E1(Apr)

E

- Eczema, genetic markers for risk in aviation applicants–806
- Education, STEM outreach–479, 545
- Ejection, pilot, cardiac rupture due to fall from height–755
- Electrocardiography (ECG), exercise, for screening military aircrew–666
- Elite athletes
cardiovascular concerns after COVID-19 in–855
personality traits of elite performers–783
- Emergencies, in-flight
CASA medevac operations–536
physicians' management skill assessment–633
remote guidance for US-guided percutaneous intervention in space–882
- Emergency physicians, assessing in-flight emergency management skills–633
- Epidemiology, obstructive sleep apnea in army aircrew–415
- Epilepsy, in a military pilot–824
- Equilibrium, and vestibular safety of modafinil–487
- Ernsting hypoxia prevention model, post-decompression, variations on–99
- Errata–398, 539, 709, 822, 823
- Evacuations
CASA medevac operations–536
of citizens during COVID-19 epidemic–94
- Event-related potential, changes at altitude–791
- Executive brain functions, in air traffic controllers–426
- Executive control, changes at high altitude–791
- Exercise
abnormal liver chemistries after severe physical–129
hypoxic capacity, repeated ischemic preconditioning effects–13
- Exercise countermeasures
blood flow restriction–32
potential of NMES to prevent bone loss–774
- Exercise electrocardiography, for screening military aircrew–666
- Experimental Aircraft Association, innovations at AirVenture–617
- Experience
flight, and pilots' confirmation bias in lost procedures–618
time cost of medical officers in spaceflight–816
- Extended Duration Orbiter Medical Project–472
- Extravehicular activity, quantifying heel-lift during spacesuit gait–643
- Eye tracking
coincidence anticipation timing responses–79
operator performance during spacecraft docking–480

F

- Falls, cardiac rupture due to fall from height–755
- Farnsworth-Munsell 100-Hue, computerized, for color vision test in pilots–362, E1(Apr)
- Fatalities, cardiac rupture due to fall from height–755
- Fatigue
in aerial firefighting crews–749
biomathematical modeling of sleep on ultra-long-range flights–4
in commercial airline pilots during COVID-19–433, E1(May)
drowsiness in simulated solo flight–354
equilibrium and vestibular safety of modafinil–487
pilot in-flight sleep during ultra-long-range flights–368
risks for pregnant aeromedical helicopter aircrew–866
sleepiness in airline cabin crew–50
subjective effects of modafinil in fighter pilots–739
- Fatigue index, +Gz exposure and flight duty limitations–390
- Federal Aviation Administration (FAA), medical certification of diabetic pilots–627
- Female crewmembers, risks for pregnant aeromedical helicopter aircrew–866
- Fever of unknown origin, with cytomegalovirus infection–58

- Fighter pilots—*See also* Military pilots
+Gz exposure and flight duty limitations–390
combined hyperventilation/hypoxia training–681
cost/benefit of physical therapy and strength training for–637
cytomegalovirus infection in–58
latent autoimmune diabetes in–106
nasal fracture in–399
self-medication among–571
subjective effects of modafinil in–739
- Firefighting crews, aerial
sleep, workload, and stress in–749
- Fitness to fly—*See* Safety, aviation; Aeromedical disposition; and Waivers
- Fixed wing aircraft
general aviation accidents on the ground–597
sightseeing accidents with–532
- Flight attendants
fatigue and sleepiness in–50
Pieterse protocol return to flight assessment–551
- Flight duty limitations, +Gz exposure and–390
- Flight experience, and pilots' confirmation bias in lost procedures–618
- Flight simulation
galvanic vestibular stimulation in virtual reality–406
student pilot drowsiness during–354
- Flight surgeons, migraine history and outcomes–26
- Fluid challenge, effects on ICP post-spaceflight–347
- Fractures, nasal, in fighter pilot–399
- French Air Force, self-medication among fighter aircrew–571
- French Military Medical Service, CASA Medevac operations–536
- Fuels, aviation, risks for pregnant aeromedical helicopter aircrew–866

G

- G forces
+Gz exposure and flight duty limitations–390
cerebral hemodynamics in +Gz or 0 G–581
physiological effects of suborbital spaceflight–830, E1(Dec)
- Galvanic vestibular stimulation, in virtual reality flight training–406
- Gas bubble formation, test-retest variation in high altitude exposures–46
- General aviation
accidents on the ground–597
analysis of accidents in–442
hyperuricemia risk factors in pilots–22
sightseeing accidents–532
- Genetics
markers of eczema risk in aviation applicants–806
in precision military aerospace medicine–89, E1(Feb)
- German Air Force
brain and head MRI and fitness to fly–450
exercise ECG for screening aircrew–666
return to flying after catheter ablation–725
- Germany
analysis of aircraft accidents in–442
history of pilot physicians in–767
- Glucose monitoring, continuous
in centrifuge-simulated spaceflight–688
medical certification of insulin-treated diabetic pilots–627
- Gout, hyperuricemia risk factors in civilian pilots–22

H

- Hand propping, general aviation accidents on the ground–597
- Hawaii, aviation sightseeing accidents in–532
- Head tracking, coincidence anticipation timing responses–79
- Healthcare, barriers for pilots (Commentary)–649
- Heart rate variability, responses to ketogenic diet–507

Helicopter pilots, posture and helmet effects on neck—458
Helicopters

risks for pregnant civilian aeromedical aircrew—866
sightseeing accidents with—532

Helmet-mounted displays

digital alternative to TNO stereo test—840
head vs. eye tracking—79

Helmets, effects on neck pain in helicopter pilots—458

History

Focus on Aerospace Medicine History—61, 472, 767
This Month in Aerospace Medicine History—66, 133, 402, 403,
477, 601, 602, 651, 710, 770, 828, 888

Human performance—*See also* Cognitive performance

of commercial airline pilots during COVID-19—433, E1(May)

eye tracking during spacecraft docking—480

fatigue in aerial firefighting crews—749

in hypergravity and microgravity—581

in infantry battle drills, impact of sleep on—557

personality traits of pararescue personnel—783

spatial ability and teleoperation performance—717

subjective effects of modafinil in fighter pilots—739

Hyobaric exposure, test-retest variation in venous gas bubble
formation—46

Hydrogen fluoride, Spacecraft Maximal Allowable
Concentrations for—746

Hypergravity, cerebral hemodynamics in—581

Hyperoxia, dose response with brain perfusion—493

Hyperuricemia, risk factors in civilian pilots—22

Hyperventilation

hypocapnia induced by, in a military pilot—470
training in tactical fighter simulator—681

Hypobaric chamber, mitigating risk of training in—811

Hypobaric hypoxia training, hysteria and epidemic DCS—712

Hypocapnia, hyperventilation-induced, in a military pilot—470

Hyposplenism, risk in long-duration spaceflight—877

Hypotension, post-spaceflight, rapid fluid infusion effects on—347

Hypoxia

attention network changes at high altitude—791

effects of ischemic preconditioning on responses to—13

post-decompression prevention of—99

risks for pregnant civilian helicopter aircrew—866

training in a tactical fighter simulator—681

Hysteria, trigger for epidemic decompression sickness—712

I

Imaging

dose response of hyperoxia with brain perfusion—493

head and brain MRI of military pilots and applicants—450

ultrasonic video grading of venous VGE—54

In-flight medical events, management skill assessment of
physicians—633

Incidental findings, on head and brain MRI of military pilots/
applicants—450

Inertial measurement units, quantifying heel-lift during spacesuit
gait—643

Infantry battle drills, sleep and performance in—557

Infectious diseases, cytomegalovirus in fighter pilot—58

Infrared reflectance oculography, to monitor pilot drowsiness—354

Insulin treatment, medical certification of diabetic pilots—627

International Conference of Aerospace Medicine—773

Intracranial pressure (ICP)

non-invasive monitoring, in spaceflight—517

rapid fluid infusion effects on—347

Ischemic preconditioning, effects on responses to hypoxic exercise—13

Isolated/confined/extreme (ICE) environment, team effectiveness
and adaptation in—70

Israeli Air Force

medically disqualifying conditions among candidates—384

mitigating risks of altitude chamber training—811

return to flying after COVID-19 booster—593

J

Just-in-time training, for US-guided percutaneous intervention in
space—882

K

Keratoconus, in pilots, fitness to fly with—840

Ketogenic diet, responses to in military personnel—507

Kidney stones, tracking risk in space—546

Knowledge, time cost of medical officer in spaceflight—816

L

Liver chemistries, abnormal, after strenuous physical activity—129

Long-duration space missions

dynamic visual acuity during—800

potential of NMES to prevent bone loss in—774

prophylactic splenectomy before—877

risk of hyposplenism on—877

Long-range flights, pilot in-flight sleep during—368

Lost procedures, confirmation bias in—618

Lower body negative pressure (LBNP) device, optic disc edema in
astronauts—396

Lunar habitat, team effectiveness and person-adaptation in—70

M

Magnetic resonance imaging (MRI)

dose response of hyperoxia with brain perfusion—493

head and brain, of military pilots and applicants—450

Medevac—*See* Air medical evacuations

Medical certification

5-year analysis of aviation medical examinations—499, E1(June)

arrhythmogenic right ventricular cardiomyopathy in a private
pilot—111

of insulin-treated diabetic pilots—637

Medical conditions

disqualifying, among aircrew candidates—384

under-reporting by aviation personnel—376, E2(Apr)

Medical examinations, aviation, 5-year analysis of—499, E1(June)

Medications

modafinil, effects on equilibrium and vestibular safety—487

modafinil's subjective effects in deployed military fighter
pilots—739

self-medication among military fighter aircrews—571

Memory deficit, in a military pilot after TBI—116

Mental health

personality traits of pararescue personnel—783

of pilots, systematic review of—696, E1(Sept)

PTSD among U.S. Army drone operators—562

sleepiness and fatigue in cabin crew—50

Mental model, spatial ability and teleoperation performance—717

Metabolic rate, Skylab experiments on—61

Microgravity

cerebral hemodynamics in—581

potential of NMES to prevent bone loss in—774

Migraine, in military pilots and flight surgeons—26

Military aerospace medicine, precision, genomic landscape
and—89, E1(Feb)

Military aircrew

digital alternative to TNO stereo test—800

flying after catheter ablation of arrhythmic disorders—725

mitigating risk of altitude chamber training in—811

obstructive sleep apnea in—415
 return to flying duties after COVID-19 booster—593
 screening with exercise ECG—666
 self-medication among—571

Military personnel
 air evacuation of citizens during COVID-19 epidemic—94
 personality traits of pararescue personnel—783
 PTSD among U.S. Army drone operators—562
 responses to a ketogenic diet—507
 sleep and infantry battle drill performance—557

Military pilots—See also Fighter pilots
 +Gz exposure and flight duty limitations—390
 brain and head MRI and fitness to fly—450
 fitness to fly after TBI—116
 head vs. eye tracking—79
 hyperventilation-induced hypercapnia—470
 medically disqualifying conditions among candidates—384
 migraine history and outcomes in—26
 self-medication among—571

Modafinil
 effects on equilibrium and vestibular safety—487
 subjective effects in deployed military fighter pilots—739

Mood, responses to ketogenic diet—507

Moon missions, team effectiveness in a lunar habitat—70

Multiple sclerosis, neurocognitive deficit in a commercial airline pilot—764

Musculoskeletal disorders
 +Gz exposure and flight duty limitations—390
 posture and helmet effects on neck pain—458

Myocarditis, risk after COVID-19 in pilots—855

N

Nasal fracture, in a fighter pilot—399

National Aeronautics and Space Administration (NASA)—See also Spaceflight
 optic disc edema in astronauts—396
 revisions to propylene glycol in spacecraft air—467

Near-infrared spectroscopy—517

Neck pain
 +Gz exposure and flight duty limitations—390
 chronic, in helicopter pilots—458

Nephrology, tracking kidney stone risk in space—546

Neuro-ocular syndrome, spaceflight-associated—396

Neurocognitive assessment, in evaluation of TBI (Commentary)—758

Neurocognitive deficits, in an airline pilot with possible multiple sclerosis and alcohol abuse—764

Neurodynamics, in hypergravity and microgravity—581

Neurological conditions
 migraine in military pilots and flight surgeons—26
 multiple sclerosis in a commercial airline pilot—764

Neurology, non-invasive ICP monitoring in spaceflight—517

Neuromuscular electrical stimulation (NMES), to prevent bone loss in microgravity—774

Neuropsychological testing, after TBI in a military pilot—116

Night vision goggles, effects on neck pain in helicopter pilots—458

Noise, risks for pregnant aeromedical helicopter aircrew—866

Non-prescription drugs, self-medication among military fighter aircrews—571

Normobaric hypoxia training, hyperventilation-provoking, in a tactical fighter simulator—681

Nutrition, responses to a ketogenic diet—507

O

Obesity
 risk of hyperuricemia in civilian pilots—22

Obstructive sleep apnea, in military aircrew—415

Occupational health
 COVID-19 pandemic effects on well-being of pilots—734, E1(Oct)
 fatigue and sleepiness in cabin crew—50
 managing risk for pregnant civilian helicopter aircrew—866
 Pieterse protocol test-retest reliability—551
 PTSD among U.S. Army drone operators—562

Oculography, infrared, to monitor pilot drowsiness—354

Ophthalmology
 disqualifying conditions among aircrew candidates—384
 keratoconus in pilots—840
 non-invasive ICP monitoring in spaceflight—517
 optic disc edema in astronauts—396

Optical nerve sheath diameter, for ICP monitoring in spaceflight—517

Optimizing the Human Weapon System (OHWS) program—637

Orienting, attention changes at high altitude—791

Overweight, risk of hyperuricemia in civilian pilots—22

Oxygen kinetics, repeated ischemic preconditioning effects on—13

P

Pararescue personnel, personality traits of elite performers—783

Passenger health, physiological effects of suborbital spaceflight—830, E1(Dec)

Percutaneous intervention, in space, remote guidance for ultrasound-guided—882

Personality traits
 of pararescue personnel and elite athletes—783
 team effectiveness in analog lunar habitat—70

Physical therapy, cost/benefit analysis of, for fighter pilots—637

Physicians, pilot, history of in Germany—767

Physiological episodes, hyperventilation/hypoxia training in tactical fighter simulator—681

Pieterse protocol, test-retest reliability—551

Pilots—See also Commercial airline pilots; Helicopter pilots; and Military pilots
 arrhythmogenic right ventricular cardiomyopathy—111
 aviation medical examinations in—499, E1(June)
 breaking the healthcare barrier for (Commentary)—649
 cardiovascular concerns from COVID-19 in—855
 civilian, hyperuricemia risk factors in—22
 computerized test for color vision in—362, E1(Apr)
 confirmation bias in lost procedures—618
 COVID-19 pandemic effects on well-being of—734, E1(Oct)
 dose response of hyperoxia with brain perfusion—493
 insulin-treated diabetic, medical certification of—627
 keratoconus in—840
 mental health of—696, E1(Sept)
 modeling in-flight sleep during ultra-long-range flights—4
 pilot physicians, history of in Germany—767
 student, drowsiness in simulated solo flight—354
 under-reporting of medical conditions by—376, E2(Apr)

Post-landing syndrome, rapid fluid infusion effects on ICP—347

Post-traumatic stress disorder (PTSD)
 among U.S. Army drone operators—562
 pilot mental health—696, E1(Sept)

Posture, effects on neck pain in helicopter pilots—458

Precision medicine, genomic landscape in—89, E1(Feb)

Preconditioning, ischemic, effects on responses to hypoxic exercise—13

Pregnancy, managing risks for pregnant civilian helicopter aircrew—866

Prevention,
 breaking the pilot healthcare barrier (Commentary)—649
 physical therapy/strength training for fighter pilots—637
 of post-decompression hypoxia—99

Propellers, hand-propping, general aviation accidents due to—597

Prophylactic splenectomy, before long-duration spaceflight—877

Propylene glycol, revisions to limits in spacecraft air—467

Psychological health, pilot mental health—696, E1(Sept)

R

- Radiation, space
 - effects on switch task performance–673
 - risks for pregnant civilian helicopter aircrew–866
- Radiology training, remote guidance for ultrasound-guided percutaneous intervention in space–882
